VI. Reading Comprehension (14 Marks)

Read the following passage, then answer the following questions below:

From far out in space, Earth looks like a blue ball. Since water covers three-fourths of the Earth's surface, blue is the colour we see most. The continents look brown, like small islands floating in the huge, blue sea. White clouds **wrap** around the Earth like a light blanket. The Earth is shaped like a sphere, or a ball. It would take years to walk around the whole planet.

A spaceship can fly around the widest part of the sphere in only 90 minutes.

Even though spaceships have travelled to the Moon, people cannot visit the Moon without special suits. The Moon has no air or water. Plants and animals can't live there either. Astronauts first landed on the Moon in 1969. After that, there were six more trips to the Moon. They brought back Moon rocks, which scientists are still studying.

The Sun is the closest star to Earth. A star is a hot ball of burning gas. The Sun looks very big. But the Sun is just a medium-sized star. The burning gases from the Sun are so hot that they warm the Earth. Even though the Sun is always glowing, the night here on Earth is dark. That's because the Earth turns around, every 24 hours. During the day, the Earth faces the Sun. Then we see light. During the night, the Earth turns away from the Sun. Then **it** faces the darkness of space. Each day we learn more about the Earth, the Moon, and the Sun.

A. From a, b, c and d choose the correct answer: **(4 x 2 = 8M)**

26- A suitable title for the passage would be

- a) Our Planet Erath.
- b) The Closest Star to Earth.

- a) cover
- b) float
- c) look
- d) shape

28- The underlined pronoun **it** in paragraph (3) refers to

- a) the space
- b) the star

29- The main idea of the 2nd paragraph is

- a) The Moon has air and water.

From petroleum come fuel, lubricating oils, gazes, asphalt and many other products. What is petroleum? How was it **created**? Scientists believe that petroleum was formed from plants and animals that lived ages ago in and around warm seas that covered much of the earth.

As the plants and animals died, they piled up on the sea bottom. In time, millions of tones of sand and mud covered them. Under pressure, the mud and sand changed to rocks. The plants and animals turned into a dark liquid trapped in the pores of the rocks. Some of the liquid went up to the surface of the earth where men first noticed it.

Petroleum has been used for thousands of years. Ancient people, including the Chinese and Egyptians, used it as medicine. In India, it was being burned long before the beginning of the Christian era.
